

Basic Event

An initiating fault requiring no further action

Undeveloped Event

An event which is not developed further, either because it is considered unnecessary or because insufficient information is available.

Intermediate Event

An event arising from the combination of other, more basic events.

Normal Event

An event which is expected to occur as part of the normal operation of the system.

Conditioning Event

Specific restrictions that apply to some types of logic gates, for example the PRIORITY AND or INHIBIT gates.
